

ENVIRONMENTAL POLICY

01 July 2023

As a leading quality solutions provider, located in 25+ countries across 4 continents, TRIGO is committed to limiting the environmental impacts of quality issues for its customers. Leveraging our international presence, we reduce supplier travel and excessive shipments and decrease scrap through our parts inspection and rework processes. Our goal is to do our part and demonstrate positive impacts throughout the supply chain by employing a comprehensive TRIGO solution.

We also understand our activities have an impact on the environment in terms of electricity consumption, natural resources consumption, waste generation and CO2 emissions. Along with promoting prevention of pollution, we recognize our duty-of-care for the protection of the environment supported by three guidelines: reduce, reuse and recycle.

Our management is committed not only to ensuring compliance with legal, regulatory and customer requirements, but also to continuously improve our environmental performance considering the following objectives:

- Implement a monitoring and management system of our electricity consumption,
- Gradually reduce our paper consumption,
- Ensure our carbon neutrality comparing our CO2 emissions to the avoided CO2 emissions from customers thanks to TRIGO services and manage additional decarbonation opportunities including sequestration projects,
- Continuously increase the share of waste recovered by recycling processes.

This involves making our employees aware of the environmental impacts of their activities and sharing the best practices for environmental protection internally with our global teams and externally with our customers.

We rely on all our employees to adopt the right actions and to contribute to the improvement of our environmental management system through the proposal of suggestions for improvement.
